Futures trading involves the substantial risk of loss and is not suitable for all investors.

**Daily bulletins appear below, the first issued, at the bottom. This PDF file name includes the date of the first issue in the format yy/mm/dd, a format that sorts file storage in chronological order. As this market is updated daily, a new chart is added to the top. This file is replaced each 2-3 weeks, or as necessary owing to market changes and contract rolling. The commentary box is only changed when market conditions warrant, which may not be each day. Prior notice is given of any impending breaks in daily delivery, which are kept to a minimum.**

**Below the Hi-TechCharts is our EOC chart, a daily chart identifying the bull to bear, and bear to bull cycles, these being the complete cycle. An overview of our EOC cycle is included in our Tutorial, (email us for a copy [markethotspots@gmx.com](mailto:markethotspots@gmx.com)) but for Users to get the best results by marrying EOC cycles to elliptical cycles in Hi-TechCharts, we recommend emailing us for a copy of George Bayer's 'The Egg of Columbus' from which the EOC analysis is derived.**

Note the steep angle of trend as indicated by the C lines, projecting direction for at least the next 6 months. Given Silver's strength, it is likely it will travel up the indicated channel to hit target 4 - a point often producing a significant pull-back; to the C lines, or lower. This scenario is valid as long as closes hold above IC3. Price action below IC3 would indicate Silver runs in the IC3/IC4 channel through to the 1<sup>st</sup> week of January.

It is likely Silver will break up through HEC and enter a new bull cycle series at some time in late June to July. By breaking above the ending IC3 cycle, it is likely price will head to targets 2 & 3. There is potential for minor tops at IC2, IC1 and HEC.
